

APEEE General Meeting of 15 December 2016

DRAFT MOTION 6

Motion 6 – Medical Communication Protocol

The EEBIII has a medical service with a nurse available for nearly 3000 children during school hours (not PÉriscolaire). Every day there are pupils who need to be treated by the nurse. However, parents are not informed by the medical service of all the interventions given to their children.

Several parents have experienced this lack of transmission of information from the school Medical Service. However, it is very important for parents to be aware of visits to the medical service by their children, and even more so for the younger children. As parents we should have the opportunity to evaluate whether our child should go to the doctor or if we need a second opinion. We cannot do this if we are not informed or it's too late (for example when we arrive at home in the evening and the condition that didn't seem important in the morning, has now become serious and we have to run to the hospital) This General Assembly calls the CA of the APEEE to ask the school for the introduction of a protocol for the communication to parents of any medical treatment given to their children. This protocol should include mandatory communication by e-mail and optionally by phone of the details of the treatment with no delay, i.e. at the time the child is seen by the nurse and should at least include:

- Name of the pupil
- Time s/he is seen by the nurse
- Time the reason for going to the nurse was detected
- Diagnosis made by the medical personnel
- Treatment given to the child
- Follow-up recommendations

The motion also calls for the communication of medical intervention records to be automated as much as possible. This could give us a record of interventions, sometimes small issues become important if they are repeated over time.
